This is the tenth in a series of reports covering the findings of the European pine shoot moth survey projects in Oregon and Washington. It includes the period from July 14 to August 3 during which 57 community surveys were reported--32 in Washington and 25 in Oregon. An additional 45 communities with less than 300 population were checked but not listed in this report.

FINDINGS IN WASHINGTON

No European pine shoot moth infestations were found in any of the communities surveyed during this report period, including the cities of Pullman, Richland, Yakima, Ellensburg, and Wenatchee.

Since all major communities outside of the containment zone have now been surveyed, major emphasis during the remainder of the Region-wide survey will be devoted to an inspection survey of native lodgepole stands near selected communities previously found infested with the European pine shoot moth.

Aberdeen is also scheduled for a re-survey as the live pupae found there on July 6 were positively identified as European pine shoot moth.

FINDINGS IN OREGON

No European pine shoot moth was found in the 25 communities surveyed.

Plans for the remaining survey time in Oregon include surveys in several cities within the ponderosa pine region, such as The Dalles, Madras, Redmond, Prineville, Bend, Klamath Falls, and Medford. In addition, native lodgepole pine stands near the coast and particularly around Newport will be sampled for evidence of the European pine shoot moth.

COMMUNITIES SURVEYED FOR EUROPEAN PINE SHOOT MOTH
FROM JULY 14 TO AUGUST 3, 1962

Washington
